Advantages of Hybrid Tomatoes

It has been proven that true hybrids grow faster than open pollinated varieties, produce greater yields, show more vigor, and bear a more uniform product over a longer period of time. It is possible to incorporate into hybrids, disease resistance, the best feature of their parents, and to eliminate many of the bad features. If you want uniform fruit, extra yield, and better quality, we highly recommend the hybrid varieties listed below. The proper use of fertilizer in your soil is essential with hybrids as well as with other varieties.

Missouri 8

Main Crop Yellow—120-125 days

Developed by Mo. Agricultural College. In use for 8 years. In 6-year trials in Missouri, outyielded Reid's Yellow Dent 36 per cent. A smooth, yellow Corn, not flinty, prolific, tending to two or more good ears on fair soil and in good season. Big-rooted, strong-stalked, making it drought and wind resistant. Is also disease resistant. Dark green foliage.

MISSOURI 148

120-125 days

Missouri 148 parentage is similar to Missouri 8; however, in breeding this new hybrid the undesirable features of Missouri 8 have been removed, retaining the good features and many of the good features of U. S. 13 have been added.

A very tall hybrid with deep green foliage. Ears borne high, are long and somewhat tapering. Kernels medium yellow with medium indentation. Resistant to lodging under most conditions. Best adapted to the area south of the Missouri river. No. 148 was near the top in many of the state yield tests.

on orders for two bushels or more of Hybrid Seed Corn anywhere if you order early!

2 Outstanding White Hybrids

U. S. 523W "State Certified." A new white hybrid recommended by the University as adapted for southern and central Missouri and adjoining states to the South. May also be planted in the Northern region providing planting is reasonably early. About the same maturity as Missouri 8 and Kansas 2234. An excellent yielder with good standability and husk color. Grain type and quality suitable for milling purposes. Mostly single eared, resistant to Corn ear worm, grasshoppers, and chinchbugs. It is a top producing hybrid in Missouri.

Funk's G-777W This white hybrid has made an outstanding record over a wide area of Missouri and Kansas. Medium stalks of excellent quality carry the ears about waist high. Good on both upland and bottom soils; has done very well on light soils. Sound grain, wide kernels with top milling quality. G-777W is a medium late white Corn that yields with the better yellow varieties.

G-711 Most popular Corn for the southwest, including southern Missouri and Kansas. Tops for drought, heat and insect resistance. High yielder. Big ears, broad kernels.

G-82 New, similar to G-711, but earlier. Top yielder with fine stalk quality. Excellent record on medium to lower fertility soils. Already very popular.

Improved Golden Beauty

An open-pollinated variety that has been popular in this section for a good many years. Archias' Improved Golden Beauty produces a big handsome golden yellow ear, perfect in shape, very small cob with large deep grains. It matures in about 110 days and is one of the highest yielding open-pollinated varieties available today. Many of the open-pollinated Corns have been allowed to deteriorate. Our grower of this variety has continued to improve by selection this fine Corn. Our supply of seed is very limited. Your early order is recommended.

Midland Yellow Dent

A medium late maturing Yellow Corn, requiring normally 130 days to mature. The stalk is large compared with Reid's Yellow Dent. The ears average 7½ to 9½ inches long. Medium large in circumference, has a medium large cob. This variety is noted for its heavy yield and for its freedom from root rot diseases. Very few damaged ears.

90-Day Yellow

A quick growing yellow variety, highly desirable and popular with feeders who want an early feeding Corn. Matures in about 90 days. Archias' 90-Day Yellow ears are about 10 inches long, sometimes two to the stalk; deep, moderately rough kernels high in protein and oil content make it an excellent feeding Corn.

HICKORY KING

The white grain is so wide and deep, and the cob so small that often a single grain will cover the end of a broken cob. It has been called the Poor Man's Corn because it can be depended upon to produce a crop on poor, thin land. On good land it bears 2 ears to the stalk. By mail, postpaid, 1 lb., 35c; 3 lbs., 90c. By express or freight, pk., \$1.70; ½ bu., \$3.20.

BROME GRASS

"THE MIRACLE DROUGHT RESISTER"
Sow 20 lbs. per acre.

One of the most sensational additions that American agriculture has received in years. It is rather slow the first season, but the second year is great and once established you have it for keeps. It is hardy, permanent, stands the driest of droughts, the hottest summers, and the coldest winters. It is the first green grass in the spring, the last in the fall, and stays green all summer when other grasses are dry. It is very high in feeding value; will carry from 50 to 100 per cent more livestock per acre than Blue Grass. Cut for hay, you will have from three to four tons per acre. All classes of livestock like it as it is very palatable. It is a grass and so it cannot poison the stock. Sow either fall or spring using 15 to 20 lbs. per acre. Have a firm, well packed seed bed, harrow in lightly and roll well if at all possible. Do not cover too deeply—one-fourth to one-half inch is plenty. You can get two crops in a season. Harvest when it is one-third to one-half in bloom. It is easily killed under cultivation if you want to get rid of it. Our Brome Grass is Achenbach (Southern Strain), Native Kansas Strain; 10 lbs., \$5.25, postpaid. See Field Seed List for quantity prices.

ALFALFA

Archias' northern and native grown Alfalfa deserves to rank first among legumes. Extremely deep rooted, withstands drought as well as severe winters. It furnishes more green foliage, more pasture and dry hay per acre than any known variety of hay or grass. Plant Adapted Seed—approved for AAA payments, save money and get dependable seed by buying your Alfalfa from Archias.

GERMAN MILLET

Sow 30 to 40 pounds to the acre

GOLDEN or HAY MILLET. It is sown in the spring, and after harvesting leaves the ground in the finest condition for Wheat.

PROSO MILLET. Also known as Hog Millet. Grown almost exclusively for seed, yielding up to 60 to 70 bushels per acre. Excellent poultry feed. Needs warm weather and soil for quick germination. Sow 40 to 50 lbs. to the acre. Drill in close rows or broadcast.

ALTA FESCUE New Wonder Grass.

There's nothing like it. Heavy yielding wonder grass lives 20 years or more, is highly palatable, a summer producer, soil builder and weed eradicator. Alta Fescue produces as much or more fall and winter foliage as other grasses adapted solely to those seasons. Produces more summer foliage than all but the strictly summer-growing grasses. High feeding value and palatability. Rapid recovery after pasturing. Wide adaptability to soils, climate, and moisture. See Field Seed list for prices. Inoculate all Legume Seeds with

Atlas Sorgo

Produces 15 to 20 Tons Fodder Per Acre.

The heaviest producing Sweet Sorgo known. Outyields Corn 3 to 1. A matchless drought resister, Atlas remains green when Corn is completely dried up. Atlas makes a palatable and very nutritious feed, especially for cattle. Grows 10 to 12 feet tall. Every farm should have at least 10 acres planted to this valuable crop. The grain makes an excellent chicken feed, too. We offer the genuine "Missouri State Certified" Atlas Sorgo. Certified seed is the cheapest and safest to buy.

5 lbs., \$1.25; 10 lbs., \$2.25, postpaid. See Farm Seed List for quantity prices.

Ladino White Clover

U. S. Department of Agriculture says: "Ladino is the largest growing form of White Clover. It is similar to White Dutch, but grows twice as large." It is a long-lived perennial, excellent for grazing, as well as producing a most nutritious and palatable hay crop. Its tap root goes down one to three feet. The stems run on the ground, taking root. It is not subject to Alfalfa diseases and is ideal to plant after Alfalfa. It does not bloat livestock as much as other Clovers, but is safer to plant with Timothy, Red Top, Meadow Fescue, Kentucky Blue Grass, Orchard Grass and Rye Grass.

See Farm Seed Price List for quantity prices.

Orchard Grass

One of the best long-lived, deep-rooted grasses for year round pasture or hay or to reseed on old Alfalfa sods. It does well on practically every type of soil, including acid soils, thrives in the shade, grows vigorously and produces large crops of nutritious hay relished by all livestock. It recovers quickly when cut or grazed. It grows the year round with maximum growth in the spring and fall. Should be included in every hay or pasture mixture. Sow 14 lbs. per acre with other grasses or 30 to 35 lbs. alone in early spring or fall. See Farm Seed Price List for quantity prices.

Broom Corn

(Evergreen.) A fine crop for dry land farming where there is a market for the straw for brooms. It has practically no food value. "Certified" Sweet Sudan Grass

SWEET SUDAN is a greatly improved Sudan Grass from a hybridization of Leota Red Sorghum on common Sudan. It has great palatability, livestock eating it to the ground before touching common Sudan or other forage Sorghums. SWEET SUDAN has broader leaves, larger stems and makes taller growth, stooling heavier than common Sudan. It is a truly great improvement over common Sudan, and in our opinion will completely replace common Sudan in a few years. We recommend that every farmer put in at least a part of his Sudan acreage with SWEET SUDAN to prove to himself the many advantages for both hay and grazing over common Sudan. Not recommended for pasture in sections where Sudan will sunburn as Sweet Sudan is a cross with Leota Cane.

See Price List for quantity prices.

"Certified" Sudan Grass

Sudan Grass is primarily a hay grass, its slender leafy stems making it easy to handle with ordinary haying machinery. It makes its greatest growth and produces the most feed during July, August and September, when native grasses are less productive. It can be grown successfully on almost every class of soil from a heavy clay to a light sand, besides being particularly drought and heat resistant. Primarily an excellent hay crop, Sudan is gaining in popularity as a summer pasture. Ready to cut in 45 days. Sow after the ground becomes thoroughly warm, preferably broadcast at the rate of 20 to 25 pounds per acre. A grain drill may be used, set to sow two pecks of Wheat. Cut when in bloom, for at that stage the feeding value is highest.

See Price List for quantity prices.

Archias' "EVERGREEN" LAWN SEED

The Best Lawn Grass Mixture

Now—HORMONE and ARASAN treated—at no extra cost.

ARCHIAS' HORMONE AND ARASAN TREATED LAWN SEED will give you a healthier, greener, more permanent lawn than untreated seed will. The Hormone treatment causes more seeds to grow, gives them more strength to root, and "take hold." The addition of Arasan makes seed more resistant to "damping off" and other soil borne diseases. The combination of the two makes for a healthier, greener lawn.

You use less of Archias' lawn seed because our seed is cleaner, more weed and chaff free. For new lawn—sow at the rate of 1 pound to 250-400 square feet. To replenish old lawn, cut quantity in half.

Archias "EVERGREEN" Lawn Grass Mixture

The best general purpose mixture for Missouri, as it makes a vigorous year-round growth with only average attention. Composed of extra heavy plump seed—the very best Kentucky Blue Grass, Certified Perennial Rye Grass, Creeping Bent, Agrostis Alba, and White Dutch Clover. It does not contain Timothy or other coarse grasses used in cheap mixtures. Do not confuse with cheap, inferior mixtures sold by some seedsmen under the name "Evergreen." We invite your comparison of our "Evergreen Mixture" with the highest priced seed offered anywhere.

1 lb., \$1.00; 3 lbs., \$2.95; 5 lbs., \$4.65

Lawn Weeds and Crab Grass

When Zotox is applied in the minimum solution it kills crab grass without destroying permanent lawn grasses. The selective action is attributed to the fact that crab grass has broader leaves and absorbs more of the chemical than do the narrow-leaved turf grasses. Being a shallow-rooted annual also makes crab grass less resistant to Zotox than are the deep-rooted perennial grasses. Zotox is sold in four convenient sizes. 8 ozs., \$1.00; 16 ozs., \$1.50; 32 ozs., \$2.50; 5 lbs., \$4.50. An 8-oz. bottle treats 1000 to 2000 square feet.

KILLERS

Can be used on seedling or mature crab grass.

Harmless to soil. Breaks down to beneficial fertilizer elements. Readily soluble in water. Easily cleaned from sprayer with plain water.

WEEDONE

Crab Grass Killer is non-poisonous. Contains potassium cyanate. Kills crab grass and chickweed without killing clover, bluegrass and other desirable grasses.

HELEN TRAUBEL. AARS 1952. (Pat. App. For.) Named after one of the greatest of American concert artists. PEACE. (Pat. No. 591.) Won the All-America Rose Award in 1946 with the highest score ever given a new Rose. Perfect buds slowly open into large, fully double, fragrant flowers.
